

Natural Security - Overview

This documentation describes all functions and aspects of usage of Natural Security. It applies to Natural Security on all supported platforms.

This documentation is intended for users of Natural Security, that is, users who are to be defined in Natural Security as users of type "ADMINISTRATOR". The reader is assumed to be familiar with and have a good general understanding of Natural.

● Natural Security On Different Platforms	Considerations for the use of Natural Security on different platforms, and the differences between these platforms.
● Structure And Terminology Of Natural Security	Basic concepts of Natural Security.
● Logging On	Rules that apply when a user logs on to Natural under Natural Security.
● Finding Your Way In Natural Security	Various aspects of finding your way within the Natural Security user interface.
● Administrator Services	Description of the set of functions of the Administrator Services subsection of Natural Security.
● User Maintenance	Creation and maintenance of user security profiles.
● Library Maintenance	Creation and maintenance of library security profiles.
● Protecting Libraries	How to control the access of users to protected libraries.
● Protecting DDMs On Mainframes	How to control the use of DDMs on mainframe computers.
● Protecting DDMs On OpenVMS, UNIX And Windows	How to control the use of DDMs on OpenVMS, UNIX and Windows.
● Protecting Natural Utilities	How to control the use of various Natural utilities.
● Protecting the Natural Development Server Environment and Applications	How to control the use of the Natural Development Server environment and Natural Development Server base applications and compound applications.
● Protecting External Objects	How to control the use of external objects.
● Mailboxes	How to maintain mailboxes.
● Retrieval	How to review the existing security profile definitions and their effects.
● Countersignatures	How administrators control each other.
● Functional Security	How to restrict the availability of certain functions and how to make different functions available for different users.
● Private Libraries	How to define private libraries.
● Natural Security In Batch Mode	How to use Natural Security in batch mode.
● Transferring Security Data To Another System File	How to transfer Natural Security data from one system file to another.
● User Exits	Information on the available user exits.
● Interface Subprograms	The subprograms which may be used to perform Natural Security functions from outside the Natural Security library SYSSEC.
● Add-On Products And Plug-Ins	Considerations for the protection of various add-on products and plug-ins.
● System Libraries And Utilities - Old Protection Mechanism	Describes the old protection mechanism for controlling Natural utilities.

For information on how to install Natural Security, see your Natural Installation Guide.

For information on changes, enhancements and new features provided with this version, see the Natural Release Notes.
